

E2OPEN - GLO - QUICK GUIDE

This guide explains how to share shipment tracking data for bookings made outside the Global Logistics Orchestration (GLO) system.

HOW TO SHARE TRACKING DATA IN UI

1

OPEN PO LIST

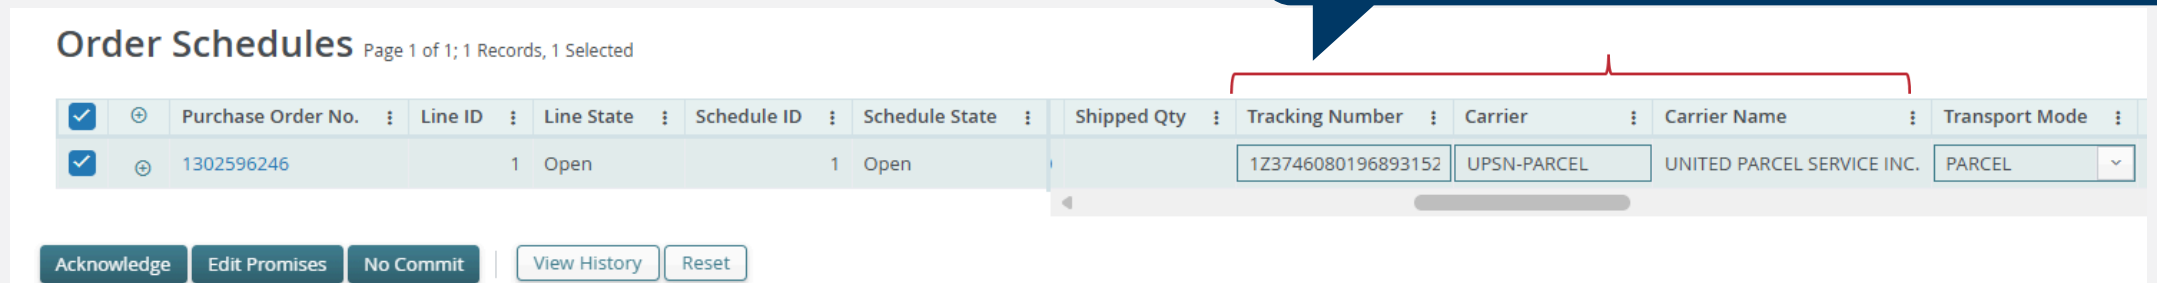

Click the link in the received email for PO details

2

SHARE DETAILS

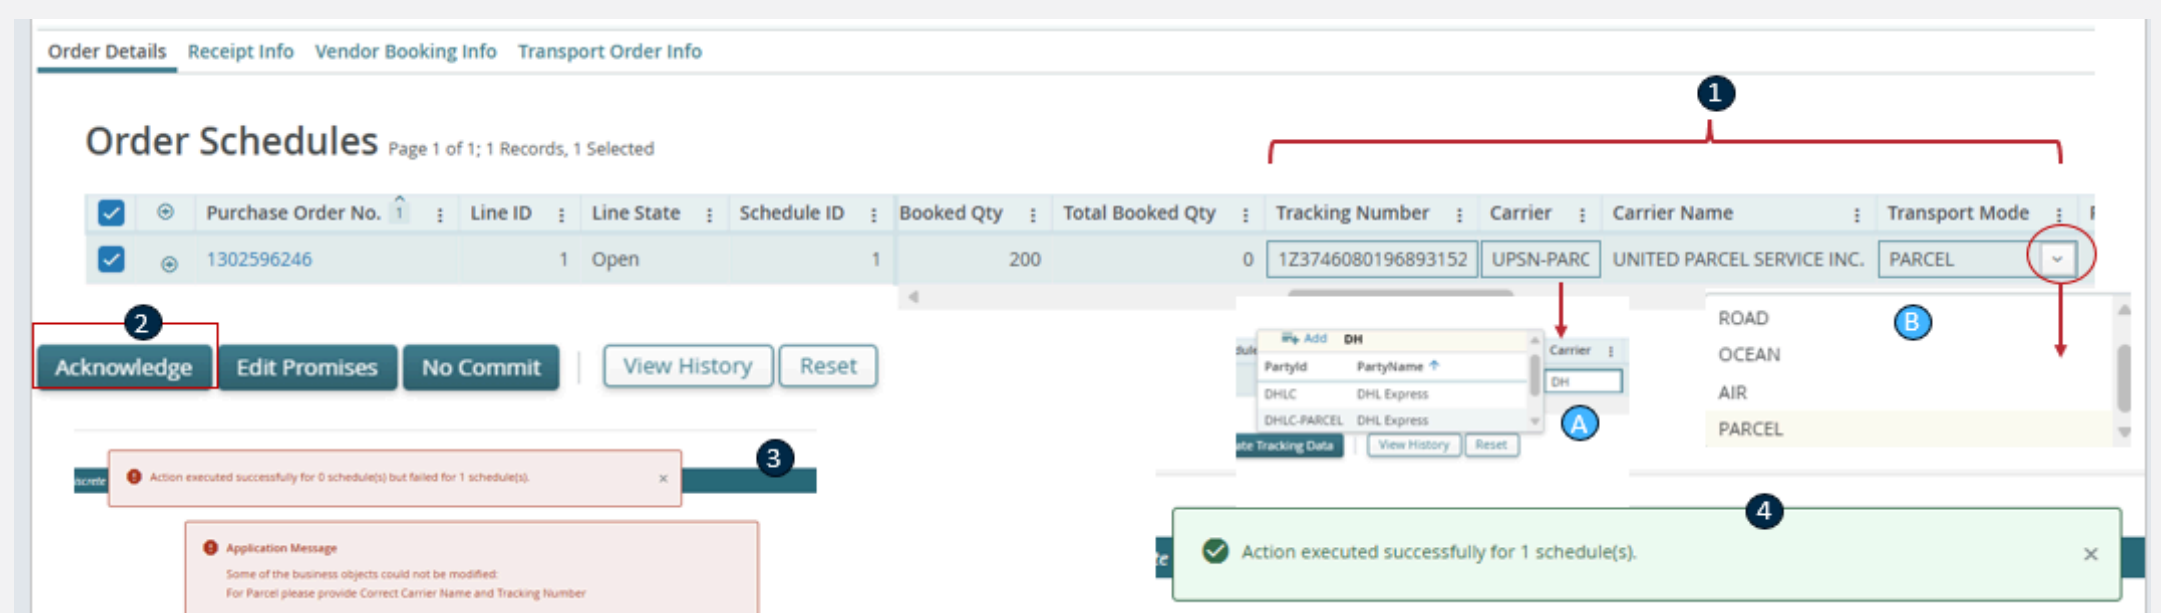

Provide tracking details information in the PO list

3

PARCEL DATA

Important Validation

Rules: For Transport Mode labeled **PARCEL**, only the following options are allowed: **FDE-PARCEL, DHLS-PARCEL, or UPSN-PARCEL**; otherwise, the system will display an error notification. Click Acknowledge once all data shared.

4

NEXT STEPS

Transport Order generation by system

After successful data sharing, the system generates Transport Order and Transport Unit objects in GLO. It then receives in-transit milestone information and predicted ETA data, which will be automatically written back to Jabil's ERP system. **No further action is required from you!**
